IDENTIFICATION OF POISON SIGNS

I. INDIVIDUAL LEVEL

This presentation may contain disturbing images
it is easy to assume poisoning in mass mortality by a carrion

But generally speaking the worst poison is the daily dripping of vultures, one by one, scattered and going unnoticed.
WHAT
THE
CORPSE POSTURE
CAN TELL
Tele-poison 

Poison
Not in raptors!
The so-called sardonic grin in long-snouted carnivores
vomits
Clenched talons

The more vulturine the species is, the less is shown.
¡¡NO!!
POLYDIPSIA
(excessive thirst)
Obviously only if delayed death, OPs
The one in a million exception
Thanks for your attention!
